

# FREE 2024 PG STUDY OPPORTUNITY WITH A STEM SCHOLARSHIP!

## EDCURRIC 723: STEM Education in Years 0-8

This course is a practice-focused examination of how to meaningfully integrate science, technology, mathematics, and statistics into a localised curriculum with students in Years 0-8.

Students will critically examine STEM education, using research to first understand and critique examples drawn from practice, and then to develop integrated and local learning experiences that authentically draw on the STEM disciplines.

As this course is linked to practice, the aim is to provide opportunity for you to trial, or be inspired to develop, your own experiences with your ākongā.

We have a limited number of Woolf Fisher Trust Scholarships available for semester 2 that cover tuition fees for this course!

Enquire now to start or continue your Postgraduate qualification with this offer.
