

Identify chemicals hazardous for pregnancy using SciTrack

1. Click Container Search and choose the Advanced Search tab.
2. Choose a location to search. You may also select multiple locations at the same level (i.e. rooms or buildings) by clicking Save once you have picked a location and then choosing another one.
3. Select the list “Hazardous Chemicals Related to Pregnancy” from the drop-down list.
4. Click Search.

The screenshot shows the SciTrack Research Material Management interface. At the top, there is a navigation bar with 'Containers and Materials' and 'Container Search'. Below this, there are search tabs: 'Advanced Search' (highlighted with a red box and number 1), 'Quick Search', 'Import', 'Paste', and 'Scan'. The main form contains several fields: 'Contains Phrase' (text input), 'Location' (text input with a search icon highlighted by a red box and number 2), 'Status' (dropdown menu), 'List Name' (dropdown menu with 'Hazardous Chemicals Related to Pregnancy' selected, highlighted by a red box and number 3), 'Owner' (text input with a trash icon), 'Organization' (dropdown menu), 'Dates' (two date pickers), 'Materials' (text input with a trash icon and an information icon), and 'Project' (dropdown menu). At the bottom, there is a large blue 'Search' button (highlighted with a red box and number 4) and a 'Reset Criteria' button.

The chemicals on this list have one or more hazard statements specific to pregnancy, reproduction and breastfeeding. This includes chemicals suspected or known to cause genetic defects, cancer, damage to fertility, harm to unborn or breastfed children, or damage to organs.
