

Mātai Tikanga Pūtaiao Undergraduate Anthropological Science

Do you want to develop a deep understanding of humankind, and our cultural and biological diversity? Studying Anthropological Science at the University of Auckland brings together the natural, human, and social sciences to help you develop this deep understanding of the human species.

What you will learn

Understanding humans in the past, present and future requires well-rounded scientists with highly developed problem-solving skills. Studying Anthropological Science offers you the chance to hone your scientific skills and apply emerging technologies, while learning about the species you belong to – what's more enticing than that?

New scientific methods and technologies in anthropological science include the analysis of DNA and ancient DNA, C-14 dating, stable isotope research, metallurgy, the analysis of live and fossil spores, the annual rings of trees, pollen grains, and human and animal remains, as well as the behavioural observation of humans and primates.

This major will give you the chance to apply more science to your studies in archaeology and biological anthropology. Other sciences complement the study of Anthropological Science, for example, Biological Science, Environmental Science, Earth Sciences or Geography.

Graduates gain an internationally accepted qualification, excellent research skills and the knowledge to work within some of the world's most rapidly advancing scientific fields.

If you're interested in studying Anthropological Science with us, it will be beneficial for you to have high school biology, chemistry and mathematics, although they're not essential. Subjects such as history, geography and English also provide useful, fundamental skills.

Choosing a subject

With so many options it's sometimes hard to choose what you want to study, but we've got you covered. You can study a double major with our Bachelor of Science to gain a broader base of skills and knowledge.

Complementary majors include:

- › Biological Sciences
- › Chemistry
- › Earth Sciences
- › Geography
- › Psychology
- › Statistics

Career opportunities

A unique view of the world

This subject brings together studies in archaeology and biological anthropology with science disciplines to create graduates who are work-ready, or who may choose to continue with postgraduate study.

Majoring in Anthropological Science allows you to view the world through a scientific and human-centred lens – a perspective that many organisations and companies find valuable.

Your transferable skills may include problem-solving, critical and analytical thinking, oral and written communication, quantitative analysis, and an awareness of cultural diversity.

Such a breadth of abilities could lead you into a variety of career paths, including archaeological consultancy for organisations such as Heritage NZ, health and nutrition research or roles in museums, environmental consultancy and mining.

Our Anthropological Science graduates have been employed in the following jobs:

- › Archaeologist, Rio Tinto
- › Geospatial analyst, Statistics New Zealand
- › Technician, International Archaeological Research Institute Inc
- › Customer relations representative, Scotiabank
- › Marine technician, Auckland War Memorial Museum
- › People and culture manager (APAC), Vend

- › Resource management monitoring officer, Waikato District Council
- › Analyst, New Zealand Police
- › Customer care coordinator, Sealed Air Corporation
- › Guest experience host, Kelly Tarlton's

What you can study

- › The practice of archaeology in Aotearoa New Zealand and the broader Pacific
- › Human palaeoecology
- › Heritage management
- › Human evolution
- › Analysis of human remains
- › Primate behaviour, ecology and conservation
- › Biosocial approaches to health

Mātai Kori Tinana Undergraduate Exercise Sciences

Are you fascinated by what influences human performance in exercise, sport and the workplace?

What you will learn

Exercise scientists study the mind, muscle, mechanics and metabolism of the moving human body and the role of exercise in human health.

Studying Exercise Sciences will facilitate skills for lifelong learning, critical and analytical thinking, communication, independence, collaboration and intellectual curiosity.

In laboratory classes you will develop hands-on skills in interacting with human participants and measurement of human activity and performance.

You will develop an understanding of how the body moves, how it responds to physical activity (and inactivity), how fitness levels can be tested and adapted, and the connections between physical activity and health.

While there are no specific subjects required from high school to be eligible to study Exercise Science, chemistry, physics, calculus, statistics and physical education all provide helpful background knowledge.

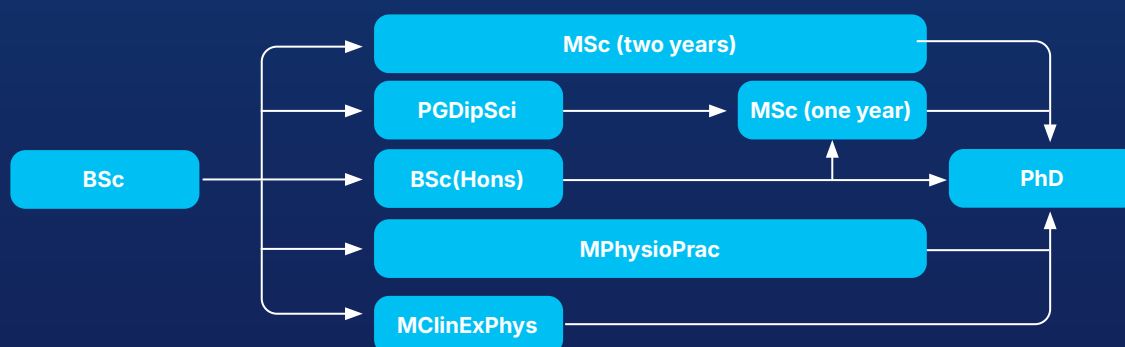

Choosing a subject

With so many options it's sometimes hard to choose what you want to study, but we've got you covered. The Applied Exercise and Sport Sciences specialisation, which is the equivalent of two majors, is for students who want a career in the exercise sciences. It provides all the knowledge you need for international accreditation as an Exercise Specialist at the end of your BSc.

You can study a double major with our Bachelor of Science to gain a broader base of skills and knowledge.

Complementary majors include:

- > Biological Sciences
- > Chemistry
- > Physics
- > Physiology
- > Psychology
- > Statistics

Career opportunities

An important discipline for everyday life

Exercise Sciences is an important discipline that relates to all aspects of our everyday life. Our courses cover human anatomy, exercise physiology, biomechanics, exercise prescription, exercise and sport psychology, and movement neuroscience.

There is a growing demand for people who can not only research and analyse performance techniques, but can work as allied health professionals to optimise human performance to improve general health and wellbeing through exercise.

As a graduate you will be prepared for a career in exercise science, high-performance sport, sports science, health and wellness, physical fitness, and movement science.

This degree provides the perfect pathway to further study in order to pursue a career in physiotherapy and clinical exercise physiology.

Jobs related to Exercise Sciences:

- › Exercise scientist
- › Sport scientist (consultant in biomechanics, exercise, nutrition, physiology)
- › Corporate exercise specialist
- › Human movement scientist
- › Injury prevention consultant
- › Respiratory physiologist
- › Clinical exercise physiologist
- › Cardiac physiologist
- › Physiotherapist

What you can study

- › Human anatomy
- › Exercise physiology
- › Biomechanics
- › Exercise prescription
- › Sport and exercise psychology
- › Movement neuroscience

Find out more about how your degree will be structured and what courses you need to take at

auckland.ac.nz/science/ug-exercise-sci

Applications close on 8 December.

"Growing up I was always very active in playing sports and dancing ballet. My love for the human body came from ballet. It taught me which muscles are used in a movement, and how to improve a movement by understanding how the body works. I was driven to carry on learning about the human body, so I enrolled in a Bachelor of Science in Exercise Sciences, hoping to apply it to both exercise and the treatment of people living with chronic conditions and disease."

Sasha Douglas
PG Dip in Clinical Exercise Physiology.

Mātai Matawhenua Undergraduate Geography

Geographers ask questions about society and the environment. They study the natural processes of the physical environment, as well as the activities and consequences of humans in this environment.

What you will learn

Geography is exciting and relevant. You'll enjoy Geography if you're interested in the worlds around you and want to make a positive difference. Geography addresses a wide range of contemporary challenges such as: climate change and sea-level rise, dirty rivers, uneven economic development, sustainable communities, migration, housing and health policy, urban pollution, indigenous rights, and environmental management.

Geographers study places, human and physical interactions and the processes that shape those interactions. They explore why nations, regions, cities and communities develop differently in different settings, how landscapes are formed, how social, economic and natural landscapes are related, and how to make better worlds by responding effectively to human-environment problems.

Some geographers specialise in coastal, glacial or fluvial processes and landforms, climatology, biogeography, hydrology or environmental change. Others study regional economics, population change, the problems of rural or urban areas, or the experience of particular groups in society. Fieldwork is an important part of majoring in Geography – you'll undertake field trips to explore New Zealand's landscapes.

You don't have to have taken geography at high school to be able to study Geography with us. However, if you have taken high school geography you will have been introduced to some key concepts and skills, which you'll find beneficial. You'll also use written and oral communication skills in your Geography major, so high school English is a useful subject too.

Choosing a subject

With so many options it's sometimes hard to choose what you want to study, but we've got you covered. You can study a double major with our Bachelor of Science to gain a broader base of skills and knowledge.

Complementary majors include:

- > Biological Sciences
- > Chemistry
- > Computer Science
- > Earth Sciences
- > Environmental Science
- > Psychology

Career opportunities

A foundation for a host of occupations

Geography is exciting, challenging and relevant to today's world. Geographers study the natural processes of the physical environment, as well as the activities and consequences of humans in this environment.

A Geography degree gives graduates an edge. The skills you learn mean you can be found working in a wide range of occupations in an equally wide range of organisations. You might use your training directly in your workplace, or find the broad education and flexible skills are in high demand in the wider job market.

You may specialise in coastal, glacial or fluvial processes and landforms, climatology, biogeography, hydrology or environmental change. Or you could find yourself exploring the transformation of urban places, globalisation and its effects, migration and population change, or issues of ethnicity and identity. You could also specialise in spatial analysis, bringing the power of geographic information science to bear on a wide range of research problems.

Our Geography graduates have been employed in the following jobs:

- › Planning services, Beca Group
- › Geospatial specialist, Auckland Council
- › Sustainability and climate change team, PwC
- › Coastal scientist, Tonkin + Taylor
- › Other positions and roles include:
- › Policy and planning
- › Environmental and resource management

What you can study

- › Weather, wave, tide and river monitoring and analysis
- › Demographic and economic analysis
- › Mapping, cartography and geovisualisation
- › Analysis of soils and sediments
- › How to interpret physical and cultural landscapes

Find out more about how your degree will be structured and what courses you need to take at

auckland.ac.nz/science/ug-geography

Applications close on 8 December.

"Geography is such a fantastic subject in that it is broad and covers a wide range of courses from climatology to socio-economic change."

Courtney Simpson

BA Geography, BSc (Hons) Geography,
MSc Environmental Management.

Mātai Hinengaro Undergraduate Psychology

Are you fascinated by human behaviour? Do you wonder what motivates us? What about how we learn? Psychology is the study of the mind and behaviour.

What you will learn

As a Psychology student you'll investigate how people think, learn, perceive, feel, interact with one another, and understand themselves. You'll study different sources of Psychology knowledge, including learning from animal behaviour, and you'll learn how to gather and analyse observable and repeatable behavioural data, in the laboratory or out in the world.

You don't have to have taken any particular subject at high school in order to study Psychology with us. However, subjects that develop critical thinking and written communication skills, such as English and History, will be useful. It is also helpful to have science subjects such as biology and statistics as understanding the brain and analysis of data are important parts of Psychology.

Choosing a subject

With so many options it's sometimes hard to choose what you want to study, but we've got you covered. You can study a double major with our Bachelor of Science to gain a broader base of skills and knowledge.

Complementary majors include:

- › Anthropological Science
- › Biological Science
- › Chemistry
- › Exercise Sciences
- › Pharmacology
- › Physiology

Career opportunities

A fascinating subject

Many avenues open up to graduates with a degree in Psychology.

Building your knowledge about relationships, neuroscience, as well as human behaviour, thinking, reasoning, emotion, mental health, language development, perception and personality means you may have an advantage in the job market, due to your understanding of psychological theory and practice.

As a graduate, you may find a position in a business, health service, or in a research institute.

Your job could include developing psychological tests, statistical analyses, or surveys and questionnaires, as well as being involved in staff recruitment, personnel training and evaluation.

Our Psychology graduates have been employed in the following jobs:

- › Talent consultant, Air New Zealand
- › Dean of Formation, Uniting Mission and Education
- › Psychologist, Department of Corrections
- › Clinical Psychologist, Auckland District Health Board.
- › Human resources coordinator, Auckland City Council
- › Product owner: Speech Technology, Tomtom
- › Creative programmes producer, The Edge

What you can study

BSc

- › Social and cultural psychology
- › Neuroscience
- › Learning and development
- › Clinical psychology
- › Research methods and statistics

Find out more about how your degree will be structured and what courses you need to take at

auckland.ac.nz/science/ug-psychology

Applications close on 8 December.

"I found that I loved to learn about why people do the things they do and how we can use this knowledge to understand people's everyday behaviours."

Jessie Houston
BSc in Psychology
