Bias in Aotearoa’s education systems has been well-documented. The research group’s goal is to move beyond documenting bias to examining efforts that disrupt bias on different levels of the system. The aim is to provide empirical, rigorous evidence of successes as well as identify barriers to success of such efforts. Candidates can propose studies that can be conducted within or outside of formal education settings in Aotearoa New Zealand, or overseas. We also invite scholarship applicants whose project would align or add to our 3-year Marsden-funded study that develops, implements, and evaluates an anti-bias intervention using virtual reality technology.
